

THE VICTOR 9000 BUSINESS COMPUTER
VICTORCALC/REPORT MANAGEMENT SYSTEM

WaterCalc is the Report Management System that can become your indispensable management tool. It literally adds your "third dimension" to your reporting.

An axis of depth joins the horizontal and vertical — so you can track a number of different profit centers over the same period of time, or follow actual performance against projections. It all adds up to the more effective plan. Considered these ones.

WaterCalc creates and instantly updates reports for financial accounting, engineering, mechanical applications. Its new dimension extends your capabilities: reports may be kept over a period of time and historical analysis of data becomes quick and easy.

WaterCalc is a DPM-based System which can generate income statements, balance sheets, sales forecasts, and other financial reports. Its advanced "data cube" provides a "third dimension" calculating ability which allows for the capture of thousands of individual records which can contain a number, a label, or formula.

WaterCalc Has Dynamic Editing Capability. Inserting commands or changes is as if to a word's contents. Reports can be up to 255 cells wide, long, and deep. Multi-page report pages with control layouts show on any page or view any column or row through all the pages.

WaterCalc Gives New Flexibility. As its editing functions, one element of lengthy reports can be altered to show how a single change affects all your figures. After inserting, editing, or deleting bits of information, the program quickly and automatically recalculates the entire report.

Forecast Trends and Conditions. With WaterCalc's editing capability, you can update morning reports quickly. Financial projections, percent changes, and other considerations can be illustrated by changing a single number or formula.

Victor-Gale Gives You an "Electronic Book". Instead of a mere electronic page, you get the power and versatility of a "book". Victor-Gale has the ability to copy your data in words or numbers, entire sections of pages, or full sections from sets of pages. A few you may have independent sections on-screen and other readings that are larger than control on-works. Calculations on calculator and immediate transfer, making the viewing of live charts and work in progress can be performed.

Victor-Gale Offers Remarkable Mastery of whole numbers and formulas to our unique three-dimensional matrix . . . and all of these thousands of colors can be changed in easily and they were physically adjacent. With Victor-Gale, you can not only calculate income categories over time . . . but also by individual departments, markets, or regions.

Victor-Gale's Third Dimension Makes Analysis Easier. Through the use of a third dimension, you get the whole picture - a dimensional analysis of data inspected. The third dimension also indicates the trend for keeping "Good" copies of reports (records) with Victor-Gale, all the information is right at your fingertips . . . at all times.

Victor-Gale . . . The Report Management System that is instantly useful and easy to use

- Forecasting
- Flow Charts
- Sophisticated Project Management

Because it already adds a new "third dimension".

VICTOR 9000 THE DESKTOP BUSINESS COMPUTER SYSTEM

The Victor 9000 is a fully integrated computer system designed for business applications. Priced like a personal computer, computing the Victor 9000 has a capacity which rivals more expensive min-computers. For it takes up little more desk space than a typewriter.

Here's why the Victor is the main computer for your business.

***More storage capacity**

The 9000 standard dual-drive, single-ether disk system has a capacity of 1200GB (or 1.2 million bytes).

***Dual format CRT display**

The Victor display screen has a high resolution matrix which can display both a standard 80-column format and an expanded 160-column format.

***A growing software library**

Victor has designed a complete software library to meet your every day business needs, plus programs for specific vertical business applications.

***Human engineering for ease of operation**

The Victor display monitor swivels to the left and right and the keyboard and keyboard for optimum viewing ease. The keyboard is free-standing and can be placed for maximum comfort and convenience in use.

***Two standard operating systems - at no extra cost**

The Victor 9000 comes with both CP/M 86 and MS-DOS 2.0 systems for operating the powerful 8086 and 8088 microprocessors.

***Experience where it counts**

With over 65 years of experience in solving business application problems, you can depend on Victor for service and support when you need it.
