INDUSTRY-STANDARD 16-BIT BUSINESS SOFTWARE

The new PULSAR business software is 16-bit software specially developed for new generation 16-bit personal computers.

It's inherently faster and more powerful than traditional 8-bit software.

The result: More and more business users are choosing PULSAR, making it one of the industry standards on 16-bit personal computers.

For more information on MULTIPLAN and the full PULSAR range of 16-bit software, contact your dealer or write to:

ACT (Microsoft) Limited

BUSINESS SOFTWARE

Multiplan™

MULTIPLAN is the most powerful 'spreadsheet' program yet, incorporating all of the features that the micro user has come to expect from this type of package—and more!

MULTIPLAN retains the, now standard, matrix method for the manipulation of Values, Arithmetic Expressions and Titles, with many extra developments to enable the majority of calculation and planning exercises to be performed efficiently.

Utilising the FUNCTION keys for ease of use, MULTIPLAN, moves around the 63 by 255 matrix very fast indeed.

More sophisticated facilities, such as Standard Deviation, String Handling and Rounding, are now included in the package together with a comprehensive SORT system and RELATIVE ADDRESSING methods which are rarely found in other spreadsheet systems.

Rows, Columns or even whole areas of calculation may be moved around at will and may be referenced directly by NAME.

Sections of spreadsheets, created and stored independently, may be incorporated and used by other spreadsheets through powerful LINKING facilities.

MULTIPLAN contains extended formatting utilities, to CENTRE text or numbers, etc., and allows columns or areas to be referenced by an INDEXING system of subscripts.

In order to display the results of a calculation more clearly, MULTIPLAN allows up to eight 'windows' to be superimposed on the screen at one time so that different sections of the matrix may be inspected.

All of these facilities are clearly explained in a two-volume manual, together with tutorial exercises and examples, and this is further augmented by a HELP function, which may be accessed at any time, which explains in detail, on the screen, ALL of the many options.
