INDUSTRY-STANDARD 16-BIT BUSINESS SOFTWARE

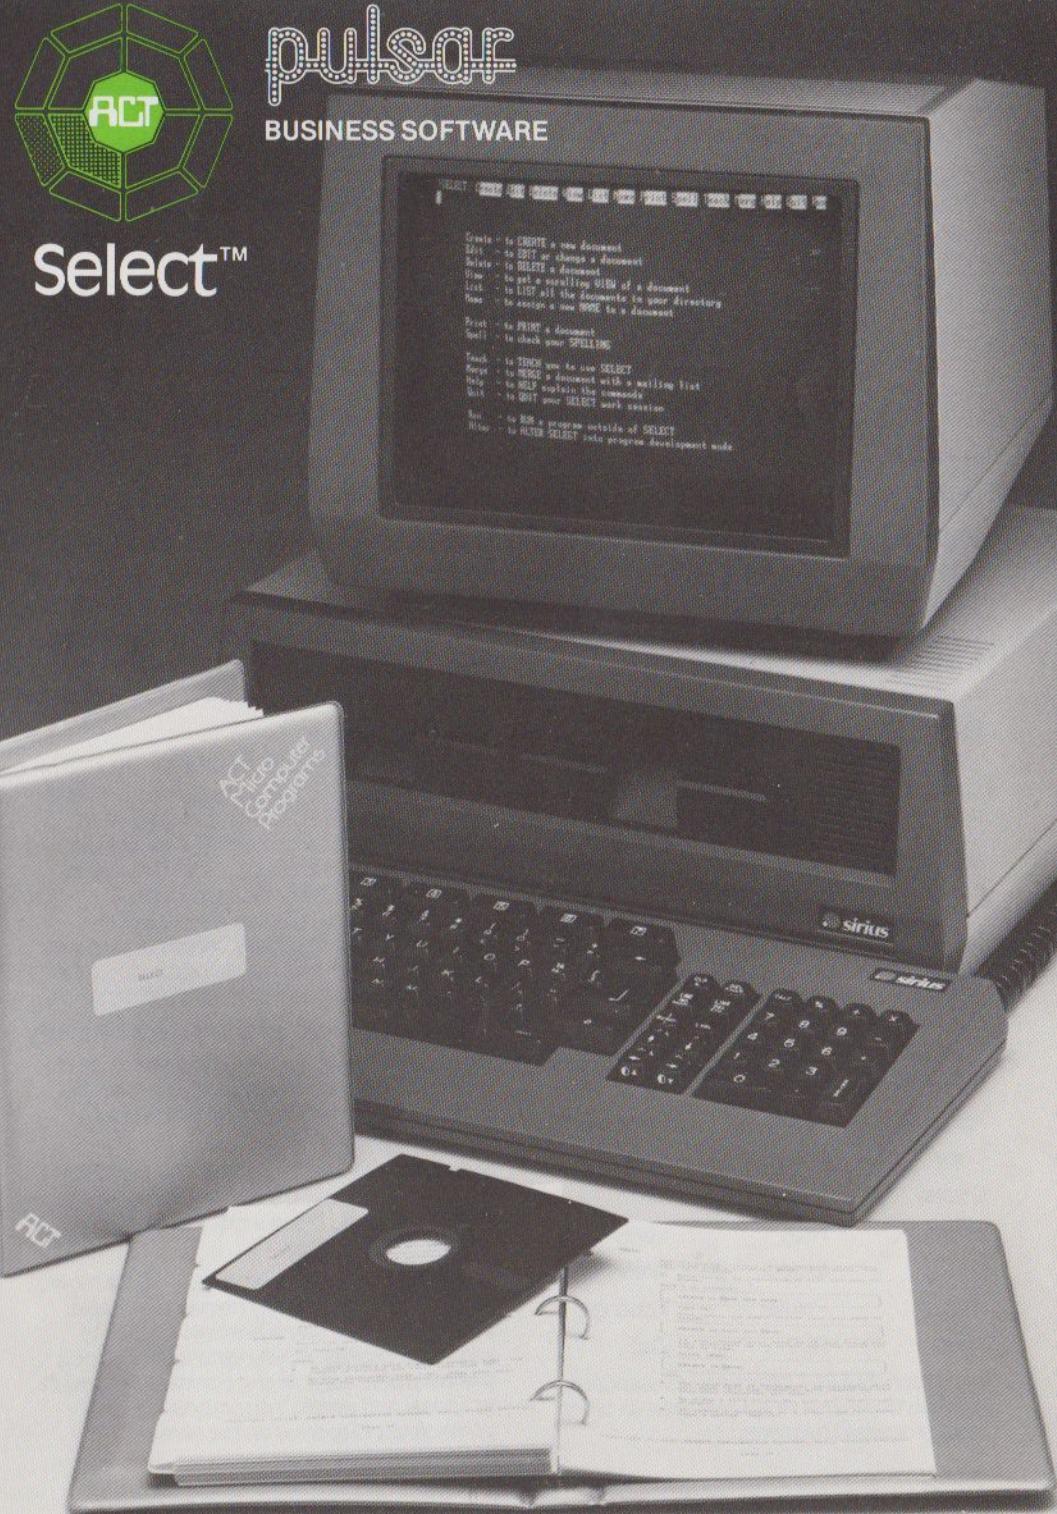

The new PULSAR business software is 16-bit software specially developed for new generation 16-bit personal computers.

It's inherently faster and more powerful than traditional 8-bit software.

The result: More and more business users are choosing PULSAR, making it one of the industry standards on 16-bit personal computers.

For more information on SELECT and the full PULSAR range of 16-bit software, contact your dealer or write to:

ACT (Microsoft) Limited
ACT House, 111 Hagley Road, Birmingham B16 8LB

Select™

The Revolutionary New Word Processing System

SELECT from PULSAR is the first self-teaching word processing system that you can use like an expert in less than 90 minutes.

Instead of studying a complex manual or spending a fortune on specialist training, you learn right on the screen – at your own pace – easily. And, instead of requiring many complicated commands or cumbersome menus, SELECT just uses easy-to-remember, single letter instructions. For example, type 'I' to insert words, and 'E' to erase.

Simply Type 'T' for TEACH

TEACH takes you through each of SELECT's commands. Step by step you interact with the computer and see your progress on the screen. You can learn the basics of this fully featured word processor before you make a purchasing decision.

At the end of your TEACH program you'll be ready to use SELECT to compose, reorganise, file and manipulate any document you want. Without the manual and in less than 90 minutes.

Just look at some of the powerful but simple commands available to you:

Append	Justify	Replace
Copy	Locate	Spell
Display	Move	Tab
Erase	Next	Verify
Go to	Output	Write
Help	Pointer	Xchange
Insert	Quit	Zap

In addition, SELECT offers you as standard, facilities usually provided as extras on other word processing systems.

SUPERSPELL™ – The Built-in Proof Reader

After you've typed in your document, key the letter 'S' and SELECT will proof-read your document from top to bottom, and pick out and display (alphabetically) each word that does not appear in its multi-thousand word dictionary. If it's a 'typo' or a misspelling, SELECT will automatically search through the entire document and replace each occurrence of that word with the correct one, in seconds.

HELP Available at the press of a key

Should you forget a command, there is an on-screen HELP mode that quickly reviews the instructions to remind you how to execute virtually any command.

Here's how it works: Let's say you are in the middle of composing a document, and have forgotten how to move a block of copy from one place to another.

Simply key 'H' for help, and then 'M' for move, SELECT will immediately display the simple instructions. The same principle applies to other commands. All you do is touch 'H', plus the initial character of any command you wish to review and simple instructions are immediately displayed on the screen.

EASY EDITING

Imagine a 30-page proposal for a prospective client. Suddenly you realise that their managing director, who you have referred to as 'ian' throughout the proposal, actually calls himself 'Iain'. No problem: Simply hit 'R' for 'Replace', key in the words 'ian' and then 'Iain'. SELECT will automatically search through the document from top to bottom, changing 'ian' to 'Iain'.

Then SELECT will rejustify the entire document.

Alternatively, if there is both an 'ian' and an 'Iain' in the same document, you can pause at each occurrence and decide on an individual basis.

And there's a whole host of editing commands to make it easy for you to correct and amend documents.

MERGE/PRINT – For Mailing Standard Letters

With MERGE/PRINT, write one version of a letter, then have SELECT type out an individual copy to each name on your list, automatically changing the inside address and the salutation. Then it will print out mailing labels to match.

SELECT – THE FIRST WORD PROCESSOR THAT'S EASY TO LEARN AND QUICK TO OPERATE

Don't let us talk you into it. Ask your PULSAR dealer to set up a demonstration of SELECT. Then sit down at the keyboard and type in 'T' for 'TEACH': You've just enrolled in the commonsense school of word processing!

>SELECT: Create Edit Delete View List Name Print Spell Teach Merg Help Quit Run

Create - to CREATE a new document
Edit - to EDIT or change a document
Delete - to DELETE a document
View - to get a scrolling VIEW of a document
